

Guiding Principles:

- Accommodate community based activities to meet the diverse needs of entire community, now and long-term.
- Provide a balance of passive and active park uses.
- Address access, security, and adjacent uses.
- Preserve and enhance natural resources; Incorporate sustainability principles.
- Develop a plan which is financially responsible and viable for the long-term.

Questions:

What core community park facilities (excluding the sports fields) should be constructed first that balance and address the above Guiding Principles? Please rank them as High, Medium and Low priority. Why?

_____ Picnic Shelters	_____ Multi-use Trails	_____ Interpretive Areas and Vistas
_____ Open Lawn	_____ Play Equipment	_____ Off-leash Area
_____ BMX Bikes	_____ Disc Golf	_____ Water Play Area

What do you think is the single most important existing site feature? What character would you like the developed park to have?

Since the site has jurisdictional wetlands that must be preserved and enhanced, what compatible activities or improvements would you suggest to enhance your experience through these areas (i.e., a series of interpretive panels about birds, wetland hydrology, soft-path trails, etc)?

Please use the back of this sheet for any additional comments and suggestions.
